## Tutorial: Applying Score-P to an ESM Code

*Tuesday, 5 November 2024 16:00 (1h 15m)*

The goal of this second session is to intensify the knowledge gained during the first session using a series of hands-on exercises with a production ESM application. These cover basic performance analysis using collected profiles, as well as a cross-experiment scalability analysis. If time permits, the challenges in examining coupled MPMD simulations will also be addressed.
